

## FOR IMMEDIATE RELEASE

6 October 2011

## FRESHFEL EUROPE (IN COOPERATION WITH SHAFFE) UNVEILS MEDITERRANEAN BASIN CITRUS PRODUCTION FORECASTS

The 2011/2012 citrus production in the Mediterranean basin should reach a total of 18,4 million tonnes, approximately the same level as the last season. While the production among EU Mediterranean countries will decrease by 5%, the other Southern Mediterranean countries are heading for a production increase by 6%. This data is part of the efforts undertaken by Freshfel Europe's Citrus Working Group which together with SHAFFE aims at improving transparency of information available for the fresh citrus sector globally.

Based on information available early October, Freshfel Europe released this week the **citrus production** forecast for the Mediterranean basin. Production should reach this year 18,4 million tonnes, a global figure similar to last year, but which witness some significant variations with regard to producing countries and products. Spain as a leading producing country will experience a production decrease by 11% after the peak level reached last year. Spanish production is expected to stand at 5,5 million tonnes. Greece and Cyprus are also both predicting a decrease by 19% and 4% respectively. However, Italy expects an increase by 8%. Other Mediterranean countries outside the EU are expecting production increases, with estimations from Turkey and Israel reaching 11% up in comparison to the previous year, while Morocco expects an increased production by 5%. Philippe Binard, General Delegate of Freshfel, commented: "This data was compiled still at a relatively early stage of the season. Climatic conditions in October and onwards, level of rains, etc. could still influence the final level of production and fruit size. We have however to lament that in these joined efforts of the international citrus community it remains difficult to get reliable data from Egypt despite the relevance of the citrus sector in that particular country."

Looking at details by citrus category, **orange** production is forecast to be 2% up on last season in the Mediterranean basin. This is mainly due to an increase in production in the non-EU Mediterranean countries (+8%), while the EU countries are expecting a decrease by 2%. Only Italy is among the EU countries forecasting a production increase (+18% up on last season), while Spain (-10%) and Greece (-23%) are predicting a decrease and Cyprus looks for a similar level of production. In contrast to this development, Turkey (+10%), Morocco (+12%) and Israel (+97%) are forecasting a production increase compared to last year. In regard to fresh exports, around 3.280.000 T should be marketed compared to 3.320.000 T last year.

**Easy peeler** production in the Mediterranean region is expected to be 8% down at 4,9 million tonnes due to a production decrease in nearly all countries. Production levels in Greece are expected to remain constant overall, with decreases announced in Spain (-13%), Italy (-9%), Cyprus (-7%), Morocco (-2%) and Turkey (-15%), while just Israel is reporting an increase (+22%). As a consequence, total fresh exports are expected to be at 2.575.000 T compared to more than 2.708.000 T last year.

With regard to **lemons**, production in the Mediterranean is forecast to rise by 6% overall. It is characterised through again a rather low EU Mediterranean output with a decrease in Spain (-7%), a constant crop in Italy compared to an average crop and increases on small volume levels in Greece and Cyprus. However, with increases in Turkey

(+25%) and Israel (+26%) and a constant production in Morocco the overall Mediterranean outlook is shortly above 3 million T. It is expected that fresh exports will reach 1.050.000 T, an increase of 50.000 T to last year.

Finally, **grapefruit** production in the Mediterranean basin is expected to increase by 24% in total, due mainly to a sharp rise of 40% in Turkey's production and by 12% in Israel's production. Only Cyprus is expecting a decrease in production (-12%). Overall, grapefruit exports should be slightly above 300.000 T.

"The citrus campaign is starting on a complex and competitive environment resulting from the market crisis and pressure on price by retailers and discounters to secure the best quality at the lowest price for consumers. Over the summer months, the market was tense for products like peaches, nectarines, melons, table grapes but also oranges and grapefruit, without forgetting several vegetables still struggling to restore image and consumer confidence after the dramatic EHEC crisis" commented Philippe Binard. "Under these circumstances, the sector should be united to pool actions for reinforcing the image of fresh produce and stimulating the consumption of healthy fruit and vegetables."
